development in the Republic of Croatia, it started to organize national shows outside the City of Zagreb.

The results are very successful shows in Ogulin, Samobor, Rijeka, Cakovec and Osijek. By joining INOVA and Be a role model in one mutual presentation, which had its first run in Osijek in 2010, it brings to the world of inventions technological advancement and direction toward inventive entrepreneurship and students. Besides the traditional invention show, there is also a selling exhibition of commercialized inventions, tourism invention show and inventions in energy industry, EEN technology exhibition and the presentation of successful commercialization of inventive products and services, the competition for the best student's business plan and the competition in the robots/models/layout category.

The only thing that could be added to this excellent tradition is the record number of foreign guests which makes INOVA under the patronage of the Mayor of the City of Zagreb, Mr Milan Bandic, the biggest invention show in the Republic of Croatia ever.

PROGRAM FOR ENCOURAGING YOUNG INVENTORS

Croatian Inventors' Association directs special attention toward young people. By organizing workshops and courses it is not possible to create an inventor nor is it possible to teach a student or a pupil to invent. There must be a talent.

However, if the talent exists, it should be recognized, encouraged and awarded and further assisted in educational and material sense.

That is the reason why there are many specialized associations within Croatian Inventors' Association, and they have specialized to work with young inventors, and the best among them participates in all Croatian Inventors' Association programs. Croatian Inventors' Association together with Zagreb Inventors' Association have organized, for the past 13 years, only for young inventors, invention shows for primary and secondary pupils and students with international participation. That is INOVA-MLADI, which is the biggest show in this part of Europe. National invention show of young inventors in Kastav and Bakar since 2013, is also organized with the mutual association of the Inventors association of Primorsko-goranska County and Croatian Inventors' Association. This show gathers crème-de-la crème, the future stars of Croatian inventions.

Agri - Green

History

The Agri-Green Company was created in 2010 as a branch of the main company named Al Ramzani Construction & Decoration Company which was established in 1990, and to support the Agri-Green invented machine as an economic and ecological-friendly machine, a solution to the coming world crisis, food security, water scarcity and desertification.

The Introduction of the President

From the Agri-Green's Inauguration Ceremony dated 17th of October, 2012 to the end of 2014, Agri-Green has received a total of One Hundred Six (106) Gold Medal Awards and Certificates from various International Organizations, Institution, Trade Shows and Fairs. This has inspired me, the Inventor and President of Agri-Green Company, to commit to research and development and continuously develop new technologies that can provide solution to environmental problems and to share these new developments to all people of the world, and create more inventions where it can render more services not only for the State of Qatar, but for the whole world in general, to be able to rescue countries affected by the food security, scarcity of water and desertification.

Agri-Green is always in the frontline to assist and support young inventors with gifted talents in the State of Qatar taking into consideration Qatar National Vision 2030. With Agri-Green Company, young inventors, individual and entrepreneurs are provided with venues and support to assist them in their desire to invent, innovate and create more ideas.

How to be a good inventor Guidebook has been prepared and uploaded into the Agri-Green Company invention website www.agrigreenqatar.com, to support the young inventors. Agri-Green has numerous benefits not only for the environment but for individuals, organizations and entrepreneurs.

It is my honor and pleasure to be one of the WIIPA team members. We will be happy to be a part of this special gift, "the opportunity to serve WIIPA".

The President of Agri-Green and Al Ramzani Construction & Decoration Company.

Dr. Adnan Fahad Rashed Al-Ramzani Al-Naimi, with over 37 years of working experience in oil and gas business, the inventor of the *Multi Award-Winning Machine*, with a registered patent (GC 2010-16757) from the Gulf Cooperating Council (GCC) Patent Office in Riyadh, Kingdom of Saudi Arabia dated 27/09/2010.

This is the outcome of long years of professional experience which led to the invention of Agri-Green and other environmental inventions.

The Agri-Green invention is able to produce cold air and water from the suspended humidity in the air. It is a self-dependent project, producing its own electricity and depends entirely on the nature (sun and air) without using any kind of fuel.

Agri-Green machine produces water throughout the year with an average production of 1200 gallons (7.3 cubic meters or 7300 liters) per day, and the total average water production is 430,000 gallons, (2,630 cubic meters or 2,630,000 liters) per year.

Agri-Green will provide alternative source of water to improve the agricultural sector by developing the modern innovative irrigation and taking advantage of the high percentage of moisture in the Region. This will support and strengthen the National Food Security Programs of any country.

Agri-Green can revitalize farms and provide them with a lot of economic benefits aside from the natural alternatives that can prevent air pollution and preserve marine life by reducing the use of desalination plants. It can also contribute to the reduction of greenhouse gases which protects the environment from the negative effects of climate change.

Agri-Green invention is one of the most sustainable development projects that can contribute financially in supporting infrastructure and development in any country with similar environment.

Agri-Green can be used to cool the sports stadiums, large open halls, greenhouses and labor camps in the farm which will help increase productivity.

Agri-Green can be used to cool down greenhouse which will improve the production of the agricultural sector

The Agri-Green machine was presented in the State of Qatar in the 17th of October, 2012 for its Inauguration which was well attended by the VIPs in the State of Qatar and some international guests. Numerous awards internationally were received by Agri-Green. From its Inauguration Ceremony dated 17th of October, 2012 up to the present, Agri-Green has received a total of One Hundred Six (106) Gold Medal Awards and Certificates from various International Organizations, Institution, Trade Shows and Fairs. The inventor was invited many times to act as an International Jury in various International Trade Shows & Competitions.

ORGANIZATION EVENT PHOTOS

inauguration

press conference

A.N.D.I. has been carrying on a very significant activity in support of small and medium inventors and for the diffusion of Italian patents: A.N.D.I. for this purpose has organized, since 1947, several inventor's trade fairs, the last ones "INVENTECO EXPO 2011 - 1st international exhibition of inventions and inventors of the Mediterranean Countries", followed by "INVENTECO EXPO 2012 - 2nd International Exhibition of Inventions and inventors of the Mediterranean Countries" with exhibitors from many countries, even from TAIWAN and Russia. this activity is supported by the magazine of A.N.D.I. "Ingegneri & Congegneri", published by Publisher Teseo Ltd, and recognized by the CNR with ISSN 2939-5833.

A.N.D.I. conscious of the three major specific problems, closely related to each other, which concern the small and medium inventors:

- 1) need for financial assistance to achieve and patent the invention;
- 2) world protection of the patent but not onerous as the current system which requires an annual expenditure for patent protection in each country;
- 3) to have the opportunity to advertise their own patent for the sale or for economic exploitation without excessive costs;

Has responded "1" with an Act of the Lazio Region (April 6, 2009 N.08) which provided for an annual selection of inventions more suitable to a profitable use for the funding grant but with the burden for the inventor to assign, against the financing, an x% of its proceeds. This law, which would have been self-financed once started the process, was repealed in 2010 by the "Polverini Council" of Lazio Region as useless!

Has responded "2" by launching in June 2014 with the its magazine "Ingegneri & Congegneri" the proposal, prepared by the Research Department of the A.N.D.I., coordinated by the lawyer Roberto Marra, to change the current payment system for the protection of the patent in force for international conventions and implemented by individual jurisdictions, postponing the payment and relevant procedures when a State is entered into the sales agreement or exploitation.

Has responded "3" by organizing, with the collaboration of Dr. Andrea Fabi, the online sale of patents through the window "inventionday.org" at a cost of one euro a day, through a company agreement ad hoc.

INVENTIONDAY

It is a website - inventionday.org- realized by AN.D.I and run by Inventionday Management Company Ltd to sale on line, at a very yearly low cost, patents or licenses of patents exploitations owned by small and medium inventors.

"Inventionday.org" has been conceived by A.N.D.I., aware of the difficulties faced by small and medium inventors to advertise their patents for selling or for transferring the rights of exploitation.

President Mr. Vincenzo Falcucci
